

Indutech

INNOVATE COMPETITIVE ADVANTAGE

WHAT IS THE END I SEEK AND
WHAT IS THE MOST PRACTICAL
WAY TO GET THERE?

COMPANY OVERVIEW

COMPANYWIDE INNOVATION MANAGEMENT FOR SUSTAINED COMPETITIVE ADVANTAGE

Indutech is based in Stellenbosch, in the heart of the South African winelands. The company was founded by Prof. Niek du Preez in 1999 to commercialise the Enterprise Engineering and Innovation Management research of the Global Competitiveness Centre in Engineering (GCC) at Stellenbosch University.

The GCC is part of the Industrial Engineering Department, so the company has a strong Industrial Engineering foundation upon which it provides clients with expertise in Innovation Management, Programme Management, Knowledge Management and Enterprise Engineering. This heritage ensures that Indutech is a learning enterprise that constantly seeks for innovative ways to translate complexity into opportunity with a keen appreciation of the impact of change on people.

Indutech believes in building long-term, mutually beneficial relationships with clients. When companies change, the greater affect of the change is seldom fully understood. Indutech's approach to business engineering promotes the holistic integration of change throughout the company, thus ensuring that negative impacts are addressed and maximum benefits are realised.

Integrity, both scientific and moral, is our core value, supported by:

- Our professionalism that finds expression in our dedication to acquiring knowledge
- Our curiosity that feeds our creativity.
- Our honesty that builds trust

VALUE OFFERING: ENABLING INNOVATIVE CHANGE

A sustainable competitive advantage can be gained by properly managing innovative change. The agility with which companies are able to adapt will contribute to their success. Indutech enables its clients to adapt rapidly to new products, technologies, processes and markets more effectively than their competitors thus providing clients with a competitive advantage.

WHAT WE DO

Together with clients we conceive, test, implement and refine ideas to dramatically improve their business.

HOW DO WE DO IT?

Indutech utilises a combination of software, best practice roadmaps and well-qualified and experienced business engineers to improve competitiveness of our clients.

SOFTWARE ENVIRONMENT

Indutech has developed software and roadmaps that facilitate the management of innovation. An example is EDEN™, a company-wide software environment, which provides high-level guidance of innovation-projects, supporting multi-disciplinary teams through pre-defined, shared structures. Knowledge, experience and good practice information is captured and shared.

VALUE OFFERING: ENABLING INNOVATIVE CHANGE

BUSINESS ENGINEERING SERVICES

Indutech's team of experienced business engineers facilitates the use of innovation methodologies and software tools. Our business engineering teams come from a variety of different disciplines including: Engineering, Computer Science, Operations Research and Business Management. This enables the team to view a client's innovation challenges from different perspectives, supporting company-wide integration.

INDUTECH – THE DIFFERENCE

Indutech's unique approach to business engineering has generated a positive response from our clients.

Our approach includes:

- Full client involvement in solution development and implementation
- Focus on long-term working relationship with clients
- Limited risk exposure and early verification through pilot and prototype projects
- Utilisation of local and international research and technology
- Risk sharing approach to contracting
- Full sustainable technology and knowledge transfer

INDUTECH'S INDUSTRY EXPERIENCE

Indutech operates in different industries ranging from agriculture through manufacturing, provincial government, parastatals to financial services.
